## Microscopy and Image Analysis Flow Cells

[All BioSurface Technologies Flow Cells are Completely Autoclavable and Reuseable]

### FC 280 and 281 Transmission Flow Cells

#### DESCRIPTION

The models FC 280 and 281 flow cell design is based on the FC 81 Single Channel Transmission Flow Cell but accommodates two growth channels. This design allows biofilms to be grown side by side for duplicate or “control – treatment” experiments. Biofilms growing in each channel can be easily compared microscopically by simply moving the microscope stage backwards or forwards. The body of the flow cell consists of a polycarbonate flow channel. Glass viewing ports allow transmitted, reflected, fluorescent, and confocal microscopy of biofilm growth in the flow channels. All units are autoclavable and re-useable.

**Viewing Window** - The viewing windows consist of a no.2, 24x60 mm cover slip. The opposing viewing window consists of a standard 75 x 25x 1 mm glass microscope slide. The glass viewing windows are held in place by an aluminum cover plate. The cover plates also compress the silicone rubber gasket to provide a leak-proof flow cell.

**Ports** - The FC 280 Flow Cell accommodates size 16 tubing (3.2 mm; 1/8” ID) on the barbed ports. The FC 281 Flow Cell comes equipped with two fully autoclavable luer fitting injection ports which may be used for inoculation, the addition of microscopy stains, or chemicals such as antimicrobial agents etc. Barbed-luer adapters are included with the FC 281 Flow Cell to provide connection to size 16 tubing.

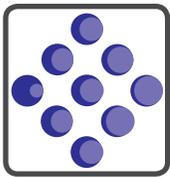

**Options** - The FC 280 and FC 281 are also available with an anodized aluminum flow channel (instead of the polycarbonate flow channel). This option provides a more rugged and durable flow cell unit.

#### PRICING (USD)

FC 280-PC	Dual Channel Transmission Flow Cell (polycarbonate flow channel)	\$940.00 *
FC 280-AL	Dual Channel Transmission Flow Cell (anodized aluminum flow channel)	\$1,130.00*
FC 281-PC	Dual Channel Transmission Flow Cell w/ injection ports (polycarbonate flow channel)	\$1,230.00*
FC 281-AL	Dual Channel Transmission Flow Cell w/ injection ports (anodized aluminum flow channel)	\$1,420.00*

*Each flow cell is provided with a complete set of polycarbonate coupons, spare gasket, spare screws, and 1 box of no. 2 coverslips.*

\*Pricing shown is for domestic US Market on net 30 day terms. Please Contact BioSurface Technologies Corporation, or one of our international distributors for international pricing and delivery terms.

## Microscopy and Image Analysis Flow Cells

[All BioSurface Technologies Flow Cells are Completely Autoclavable and Reuseable]

### FC 284 and 285 Transmission Flow Cells

#### DESCRIPTION

BioSurface Technologies announces a new product in its line of biofilm research tools. The models FC 284 and 285 flow cell design is based on the FC81 but accommodates two growth channels in the same footprint as a 96-well micro-titer plate. This format allows biofilms to be grown side by side for duplicate or “control- treatment” experiments. Biofilms growing in each channel can be easily compared microscopically. The body of the flow cell consists of a polycarbonate or anodized aluminum flow channel. Glass viewing ports allow transmitted, reflected, fluorescent, and confocal microscopy of biofilm growth in the flow channels. All units are autoclavable and re-useable. The flow cell dimensions allow for easy mounting in inverted microscope stages designed to hold 96-well micro-titer plates.

**Viewing Window** - The viewing windows consist of a no.2, 24x60 mm cover slip. The opposing viewing window consists of a standard 75 x 25 x 1 mm glass microscope slide. The glass viewing windows are held in place by an aluminum cover plate. The cover plates also compress the silicone rubber gasket to provide a leak-proof flow cell.

**Coupons** - The flow channel has been recessed to accept

**Ports** - The FC 284 Flow Cell accommodates size 16 ( 1/8 inch, 3 mm ID) tubing on the barbed ports. The FC 285 Flow Cell comes equipped with two fully autoclavable luer fitting injection ports which may be used for inoculation, the addition of microscopy stains, or chemicals such as antimicrobial agents etc. Barbed-luer adapters are provided for connection to size 16 tubing

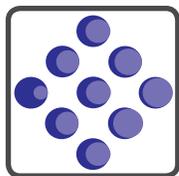

**Options** - The FC 284 and FC 285 are also available with an anodized aluminum flow channel (instead of the polycarbonate flow channel). This option provides a more rugged and durable flow cell unit.

#### PRICING (USD)

FC 284-PC	Dual Channel Transmission Flow Cell (polycarbonate flow channel)	\$980.00 *
FC 284-AL	Dual Channel Transmission Flow Cell (anodized aluminum flow channel)	\$1,170.00 *
FC 285-PC	Dual Channel Transmission Flow Cell w/ injection ports (polycarbonate flow channel)	\$1,270.00 *
FC 285-AL	Dual Channel Transmission Flow Cell w/ injection ports (anodized aluminum flow channel)	\$1,460.00 *

*Each flow cell is provided with a complete set of polycarbonate coupons, spare gasket, spare screws, and 1 box of no. 2 coverslips.*
