Evaluation of surface-associated biological reactions require surface specific evaluations. By matching surface shear and transport conditions within the Biofilm Annular Reactor to your process conditions, relevant evaluations of your water treatment processes are possible.

The BST Model 1320 Biofilm Annular Reactor consists of a stationary outer cylinder and a rotating inner cylinder. Process fluid is circulated in the annulus between the two cylinders. This model operates with a variable speed motor. The rotational speed of the inner cylinder is set to provide liquid-surface shear similar to the pipe flow shear of the process water system you are evaluating.

The Biofilm Annular Reactor (Model 1320 LS) is manufactured using an inner, slotted polycarbonate cylinder and a glass outer cylinder. Twenty (20) slides are flush-mounted on the rotating inner cylinder. The slides are available in a variety of metals and plastics, and can also be custom fabricated from most common manufacturing materials upon request. The reactor unit is fully autoclavable to 121°C. A jacketed version of the laboratory unit described above is also available (Model 1320 LJ) for evaluations which require temperature control. The Model 1320 Biofilm Annular Reactors are fully CE certified and available in 115 or 230 VAC.
Model 1320 LS Standard Laboratory Annular Reactor  $6,540.00
Includes standard reactor vessel, motor (max. speed 350 rpm), motor controller (115 or 230 VAC, 50/60 hz, CE certified), 20 polycarbonate slides, effluent tubing, bacterial air vent, flow break, spare fuses, spare pivot bearings, tubing support rod, operations manual and slide removal tool, 6 month limited warranty.

Model 1320 LJ Standard Jacketed Annular Reactor  $7,260.00
Includes standard reactor vessel, motor (max. speed 350 rpm), motor controller (115 or 230 VAC, 50/60 hz, CE certified), 20 polycarbonate slides, effluent tubing, bacterial air vent, flow break, spare fuses, spare pivot bearings, tubing support rod, operations manual and slide removal tool, 6 month limited warranty.

*Note: Requires modification of the inner cylinder (rotating cylinder) to permit a thicker slide. A thicker slide material is required to prevent breakage as the cast iron material is quite brittle. In order to implement the cast iron slides, an additional cost is required for the machining of the reactor inner cylinder above and beyond the standard price (additional cost of $702 per unit). Once this modification has been accomplished, the standard slides (all other materials) can still be used in the reactor.
